IN THE CLAIMS

The claims read as follows:

- 1. (Previously presented) A fried composition which comprises:
 - a) a food portion; and
 - at least one starch succinate ester adhered directly on the food portion to form a coated food portion which is subsequently fried or par-fried.
- 2. (Original) The composition of claim 1, wherein the starch has been converted.
- 3. (Previously presented) The composition of claim 1, wherein the starch succinate ester has a water fluidity of at least about 30 and no more than about 85.
- 4. (Previously presented) The composition of claim 1, wherein the starch succinate ester has a water fluidity of at least about 50 and no more than about 85.
- 5. (Original) The composition of claim 1, wherein the starch has been treated with succinic anhydride at a level of at least about 1% and no more than about 4%.
- 6. (Original) The composition of claim 1, wherein the starch has been treated with succinic anhydride at a level of at least about 2.5% and no more than about 4%.
- 7. (Original) The composition of claim 1, wherein the starch has been pregelatinized.
- 8. (Previously presented) The composition of claim 1, further comprising at least one non-succinated starch adhered directly on the food portion or on the starch succinate ester.
- 9. (Cancelled) The composition of claim 1, in which the composition is a fried or par-fried food.
- 10. (Original) The composition of claim 1, wherein the composition has a reduced fat content relative to an uncoated composition.
- 11. (Original) The composition of claim 1, wherein the composition has a reduced fat content of at least about 30% by weight of the composition.
- 12. (Original) The composition of claim 1, wherein the composition is selected from the group consisting of fish, meat, poultry, meat-substitute, cheese, breads, fruit and vegetable.
- 13. (Original) The composition of claim 1, wherein the composition is a fried potato product.

- 14. (Previously presented) A process of preparing the fried food composition of claim 1 comprising:
 - a) blanching a food portion in water containing from at least about 0.1% to no more than about 0.8% cations by weight
 - b) applying at least one succinated starch ester to the blanched food portion; and
 - c) frying and/or par-frying the coated food portion.
- 15. (Original) The process of claim 14, wherein the coated food portion is par-fried in (c) and further comprising (d) freezing the par-fried coated food portion to form a frozen food portion.
- 16. (Previously presented) The process of claim 15, further comprising (e) reconstituting the frozen food portion.
- 17. (Original) The process of claim 16, wherein reconstitution is by frying.
- 18. (Original) The process of claim 16, wherein reconstitution is by oven heating.
- 19. (Original) A food composition prepared by the process of claim 14.
- 20. (Previously presented) A process of preparing the fried food composition of claim 1 comprising:
 - a) blanching a food portion in water containing from at least about 0.1% to no more than about 0.8% cations by weight, and at least one succinated starch ester; and
 - b) frying and/or par-frying the coated food portion.
- 21. (Original) The process of claim 20, further comprising applying at least one coating comprising at least one starch to the blanched, succinated food portion.
- 22. (Original) A food composition prepared by the process of claim 21.
